Working in ORDANIS

A practical guide for ORDANIS Experts, Analysts and Onboarding Specialists: setting households up, running them day to day, and getting the most from CHRIS, the Centralized Household Records Integration Server.

FOR	ORDANIS Experts, Analysts and Onboarding Specialists
VERSION	October 29, 2026
CLASSIFICATION	Internal
PUBLISHED BY	Ordanis OS LLC

Contents

01	Your role on the platform	Expert, Analyst, Onboarding Specialist, and the line you never cross
02	Plans: what each household has	So you know what to promise, and what not to
03	Setting up a new household	Onboarding, step by step
04	Working a household	Every tab on the household screen, and what it's for
05	CHRIS: the household's document intelligence	What CHRIS really does, and how to get the most from it
06	Workflows, bills and the daily rhythm	Getting obligations done, on time, with a person approving
07	Client Activity and family users	Seeing what the family changed; who in the family can do what
08	Admin tasks	For admins: users, plans and the firm side
09	Quick answers	Common questions from staff

01 Your role on the platform

ORDANIS gives each household one private, organised place for everything it owns, owes, pays and keeps, and gives you the tools to run that administration well. This guide walks through the platform the way you'll use it.

Seat	What it means	What you see
ORDANIS Expert	The household's named administrator on Premier (and on one Core workflow when the family buys Expert assist). Runs bills, documents, deadlines and workflows.	Every household where you are the Expert
Analyst	Supports one Expert. Works the same households alongside them.	Your Expert's households
Onboarding Specialist	Sets a new household up. Access lasts 30 days and an admin can extend it 30 days at a time.	Only the households you're assigned to
Admin	Runs the platform. Admins can also sit in any of the seats above.	Everything

THE LINE YOU NEVER CROSS

An ORDANIS Expert is an administrator, **not a licensed investment adviser**. Never evaluate an investment, suggest an allocation, or call yourself an "adviser". Investment questions go to the family's licensed adviser (shown as Lead Advisor) or to the firm. The assistant enforces the same rule.

Signing in

1. Go to **portal.ordanisos.com** and sign in with your ORDANIS email.
2. Complete two-step verification. Some admin actions require a session that passed it.
3. You land on your **Dashboard**. The left menu holds Client Management (Dashboard, Families, Portfolio, Notes, Tasks) and Resources; admins also see the Admin section.

02 Plans: what each household has

Plan	Includes	Who does the work
Basic	Household record, CHRIS (5 GB), the AI assistant. No workflows, no Expert.	The family, self-directed
Core	Everything in Basic plus 15 GB, workflows (10 included), obligations, scheduled prompts, resources, Business Partner seats. Optional ORDANIS Expert on one workflow (Expert assist, one-time fee).	The family, self-directed
Premier	Everything, plus a named ORDANIS Expert, bill pay and the payment register, unlimited workflows.	You and the family together

- **Every plan can edit its own records.** On Premier, whatever the family changes shows up for you (Client Activity, section 07).
- A household paid by a firm is billed to that firm at the same plan prices. There is no separate firm price list; never quote one.
- Third-party costs (for example Bill.com fees) are separate from the plan fee.

03 Setting up a new household

Onboarding is where the household's trust is won. The goal is a complete, accurate record with every supporting document in CHRIS, in the first 30 days.

1. **Create the household.** Admin: Families → **New Family**. Set the plan and, for Premier, the ORDANIS Expert.
2. **Assign the Onboarding Specialist.** On the household's Overview, an admin names the specialist (an admin, Expert or Analyst). Access runs 30 days; both get an email when it is ending, and the admin can choose **Extend 30 days**.
3. **Invite the family's primary user.** From the household, send the invite. The family sets their own password; nobody at ORDANIS ever chooses or sees it. For card-paid households, the family is asked for a card in their portal.
4. **Gather the paper.** Ask for: deeds and mortgage statements, property tax bills, insurance declarations (home, flood, auto, umbrella, valuables), brokerage and bank statements, loan and credit line statements, estate documents, and recurring bills.
5. **Load CHRIS with "Snap or add several".** Photograph pages one after another or pick a stack of PDFs. CHRIS reads each one and proposes a name, summary, folder and the record it belongs to. Check each card and tap **File** (section 05).
6. **Build the records** in this order: Properties (with mortgage), Portfolio accounts, Loans & Lines, Valuables, Cash Flow (income and bills), then Tasks and obligations.
7. **Pin documents to figures** as you go: the paperclip beside a figure opens an upload already pointed at that spot.
8. **Hand over.** Walk the family through their portal, confirm who in the household needs a login and with which permissions, and note anything outstanding as Tasks.

ONBOARDING CHECKLIST

☐ Plan and Expert set ☐ Specialist assigned ☐ Primary invited and signed in ☐ Properties with mortgages ☐ Accounts with dated balances ☐ Loans and lines with what secures them ☐ Valuables with policies ☐ Bills and income in Cash Flow ☐ Key documents pinned ☐ Family users and permissions ☐ Open items as Tasks

04 Working a household

Open a household from **Families**. The tabs run left to right:

Tab	Use it to
Overview	See net worth, upcoming deadlines, family members and contacts, tasks and notes; manage the Onboarding Specialist and private-household settings (admins).
Properties	Each property with value, mortgage, second mortgage/HELOC, taxes, insurance, flood, rental income and vendors. Paperclips pin documents to each figure. Loans secured by the property are listed on its card.
Portfolio	Accounts with dated balances and history. Upload a statement and the platform proposes the closing balance for you to confirm.
Loans & Lines	All debt. Adding a mortgage asks which property it's on and saves it on that property. Other loans and lines record what secures them: unsecured, a property, a portfolio account or a valuable.
Cash Flow	Income and bills with recurrence and tax treatment; projections; mark bills paid (who paid and when is recorded).
Workflows	Obligations and the playbooks that carry them (Core and Premier).
Valuables	Art, jewellery, vehicles and the policy that covers each.
Deals, Notes, Tasks	Pipeline items, running notes (with attachments) and tasks with reminders.
Client Activity	Everything the family changed themselves, newest first (section 07).
CHRIS	The household's documents (section 05).
Prompts	Scheduled reports the assistant writes on a cadence.
Ask <name>	The household's assistant, answering from this family's records and documents.

> **ONE NUMBER, ONE HOME**
>
> A property's mortgage lives on the property and is shown under Loans & Lines too, counted once in Total Debt. If a property already has a mortgage, edit it there rather than adding a second one.

05 CHRIS: the household's document intelligence

CHRIS is not a folder. It reads.

CHRIS stands for **Centralized Household Records Integration Server**. Every document that goes into CHRIS is read (typed PDFs, scans and phone photos alike), given a clear name and a one-line summary, filed in the right folder, made searchable by what it *says*, and pinned to the figure it supports. The household's assistant answers from it. That is the difference between storing paper and knowing what's in it.

What CHRIS does for you

Capability	In practice
Reads everything	Typed PDFs, scanned PDFs and photos. A phone picture called "IMG_4821" becomes "2026 Homeowners Declarations – 12 Oak Lane".
Files it for you	Proposes the folder (or a new one when nothing fits) and how sure it is. Nothing is filed until you tap File.
Links it to the numbers	Suggests which property section (mortgage, tax bill, insurance declarations, insurance invoice, flood, rental agreement), valuable policy or loan statement it belongs to.
Fills in the record	Reads a policy to pre-fill carrier, premium, coverage and renewal; reads a statement to propose an account's closing balance. You confirm before anything saves.
Finds by content	Search looks inside documents. Each result says what it is, where it lives, why it matched, and whether it has been replaced.
Keeps history	A new policy replaces last year's on the card; the old one stays in CHRIS, marked as replaced, never deleted.
Feeds the assistant	Ask "when does the umbrella policy renew?" and the assistant answers from the declarations page.
Guards access	Files are private; links expire; every download is logged. Family members open files only if they have Download permission.
Private folder	Each family login has a folder only they can see, which AI never reads. You will not see it, by design.

Adding documents

1. **Several at once:** CHRIS → **Snap or add several**. Photograph or pick files; review each card's name, folder and link; tap File.
2. **From a figure:** click the paperclip beside the figure (for example Property Taxes). The upload opens already pointed at that spot.
3. **From a valuable or loan:** on its form, "Take a photo" or "Choose file". CHRIS files it and links it there.
4. **Replacing:** add the new one to the same spot. If something is already there, you're asked before it's displaced.

Good habits

- Pin every policy, tax bill and statement to its figure; an unpinned document is findable, a pinned one is *provable*.
- Check CHRIS's proposed name and summary. They become how the family and the assistant find the document.
- Look for the ✦ badge on a document: it means CHRIS has read it. No badge? Press ✦ **Scan**.
- Use household folders for the family's own way of thinking (for example "Lake House"), not one-off names.

06 Workflows, bills and the daily rhythm

Workflows

- An obligation (premium, estimated tax, RMD, capital call, loan interest…) is carried by a playbook. Starting a cycle lays out every step against a real calendar date, measured back from the due date.
- Steps that are already late flag the cycle **At risk** on day one.
- **Nothing sends without a named approval.** Drafts wait in the review queue; approving records who approved. Recipients are checked against the family's known contacts, and the family principal is copied.
- The platform prepares payment instructions; it **never moves money**.

Bills (Premier bill pay)

- Bills ORDANIS pays are marked in Cash Flow. When paid, choose **Mark Paid**; who and when is recorded and the family sees it.
- A bill you pay that's coming due appears in your daily summary email until it's marked paid.

Your daily summary email

One email each morning (13:00 UTC: 9 am Eastern in summer, 8 am in winter), only when there's something in it:

- **Task reminders** due today, across your households.
- **Bills you pay** coming due, with the total.
- **What your families changed** in their records since yesterday.

A good daily routine

1. Read the daily summary.
2. Clear the review queue on your Dashboard (drafts awaiting approval).
3. Mark yesterday's payments paid.
4. Look over Client Activity for anything that needs a follow-up.
5. File anything new into CHRIS and pin it.

07 Client Activity and family users

Client Activity

Families on every plan can add and edit their own records. Each change a family login makes is logged automatically: who, when, what kind of record, its name, and which fields changed. Values are deliberately not copied, so account numbers never appear in the log. Open the household's **Client Activity** tab, or read it in your daily summary.

> **WHAT TO DO WITH IT**
>
> Most changes are the family keeping things current. Follow up when a change affects something you run: a bill amount, an insurance policy, a loan payment or a removed record.

Family users and permissions

The household's primary user has full control and can invite family members. Each member gets their own login and whichever of these the primary ticks:

Permission	Lets them
Edit records	Add, change and remove properties, accounts, loans, bills, valuables, tasks and notes.
Upload documents	Add files to CHRIS.
Download documents	Open files in CHRIS (otherwise they see names only).
Manage users and billing	Invite or remove people, change permissions, change plan and card.

Business Partners (an accountant, attorney, or the family's licensed adviser) get a read-only seat and can upload documents. They're free on Premier.

08 Admin tasks

Screen	What you do there
Users	Every login by role. Families are grouped by household, primary first. Link an Analyst to an Expert. Admins can fill Expert and Analyst seats.
Signups	New self-serve sign-ups and where they came from.
Plan requests	Households asking to change plan. Approving moves the Stripe subscription; info@ordanisos.com gets an email for every request.
Enterprises, Firm billing	Firms, their households and their monthly invoices.
Utilization	Which features each household uses.
State Rules	State-specific rules the platform watches.

PLAN CHANGES ON PAYING HOUSEHOLDS

Don't change a Stripe-paid household's plan in Edit Family (it's locked for that reason). Use Plan requests or the household's Billing tab so Stripe moves too.

NEVER

Never delete a household (archive instead; permanent deletion is the owner's decision), never set or ask for anyone's password, and never copy demo households into production.

09 Quick answers

Question	Answer
A family says they can't edit or upload.	Check their permissions in the Household tab; only the primary (or someone with Manage users) can change them.
CHRIS search can't find a document I know is there.	It hasn't been read yet. Press ✦ **Scan** on the document, or the ✦ **Scan** button at the top of CHRIS to read every unread one. A ✦ badge means the assistant and search can read it.
The assistant won't answer an investment question.	By design. Point the family to their licensed adviser or the firm.
I added a mortgage and it went onto the property.	Correct: mortgages live on the property so debt is counted once.
My onboarding access disappeared.	The 30 days ended. Ask the admin who assigned you to extend it.
I didn't get a daily summary.	There was nothing to report that day. If you expected something, tell an admin.
Something looks wrong or broken.	Note the household, what you did and what you saw (a screenshot helps), and send it to the platform admin.
